DETAILED ACTION

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 & 11-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Hisajima et al. (US Patent No. 5,275,010). Hisajima discloses an absorption chiller having a controllable capacity whereby detected conditions of the refrigerant is determined to prevent freezing within the evaporator. The claimed invention is achieved by a method whereby detecting a refrigeration demand of the absorption chiller and determining conditions in an evaporator and controlling the thermal input to a high temperature regenerator. The disclosed invention of Hisajima comprises: a first detection means for detecting refrigeration demand, a first control means for controlling a thermal output of a high temperature regenerator, an evaporator (4), a condenser (3), absorber (5), flow regulation valves (13,15), a three-way valve (16) and furthermore flow rate detection means (see column 4, lines 25-35).

Allowable Subject Matter

Claims 4-10 & 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
